Emma Steyn

Bachelor of Architectural Studies

Portfolio of Selected works: 2024-2026

About me

With a strong foundation in design, research and problem-solving, I bring energy, optimism and curiosity into every project. I am eager to apply my developing skills, to learn from professionals and contribute meaningfully to your practice during an internship.

Education
School of Explorative Architecture
Bachelor of Architectural Studies
2024-2026
Average of High Pass (>70%) across all years

Bachelor of Science in Human Life Sciences
Stellenbosch University
2021-2023
Dean's Merit List Student

Experience
SAOTA
Student Intern
June - July 2026

Hours Clear Architects
Student Intern
September - November 2025

Skills
Revit
Lumion
Rhino
Twinmotion
Procreate
AutoCAD
Affinity (Similar to Adobe suite)
3D printing
Laser Cutting

Qualities
Attention to detail
Clear communicator, with strong teamwork and collaboration skills
Reliable, organised and able to perform well under pressure
Positive and proactive mindset, eager to learn.

Achievements
New Architecture Now 2025 Finalist
Recognised for an innovative design proposal, selected among top entries, My work formed part of a curated exhibition at the AZA Conference.

House Kamter

emerging from the mountains

Project Type Residential

Location Geirangerfjord, Norway

Year 2026

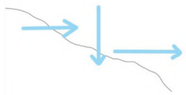

Software
Revit
Lumion
Procreate
AI Rendering Software

About
Conceived as an extension of the surrounding mountains. A solid concrete lower level anchors the home firmly to the terrain, while a lighter upper volume, clad in charred timber, rises above it. The contrast between the two materials creates a sense of permanence and lightness, allowing the building to appear as though it is emerging naturally from the landscape.

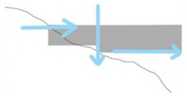

Existing Topography

The existing topography of the site establishes the primary design constraint and becomes the foundation from which the architectural form is developed.

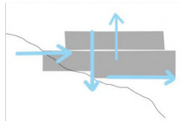

Shaped by the Fjord

The building footprint extends along the contours of the mountain, minimizing intervention while reinforcing a strong connection to the terrain.

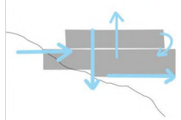

Embedding the Lower Level

The lower volume is carefully integrated into the slope, allowing the architecture to emerge naturally from the landscape rather than sit above it.

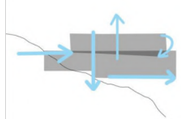

Elevating for Light and Views

The upper level is introduced to capture panoramic fjord views while increasing access to natural daylight and passive solar gain.

Architectural Language

The upper volume mirrors the footprint of the lower level, establishing a cohesive architectural language.

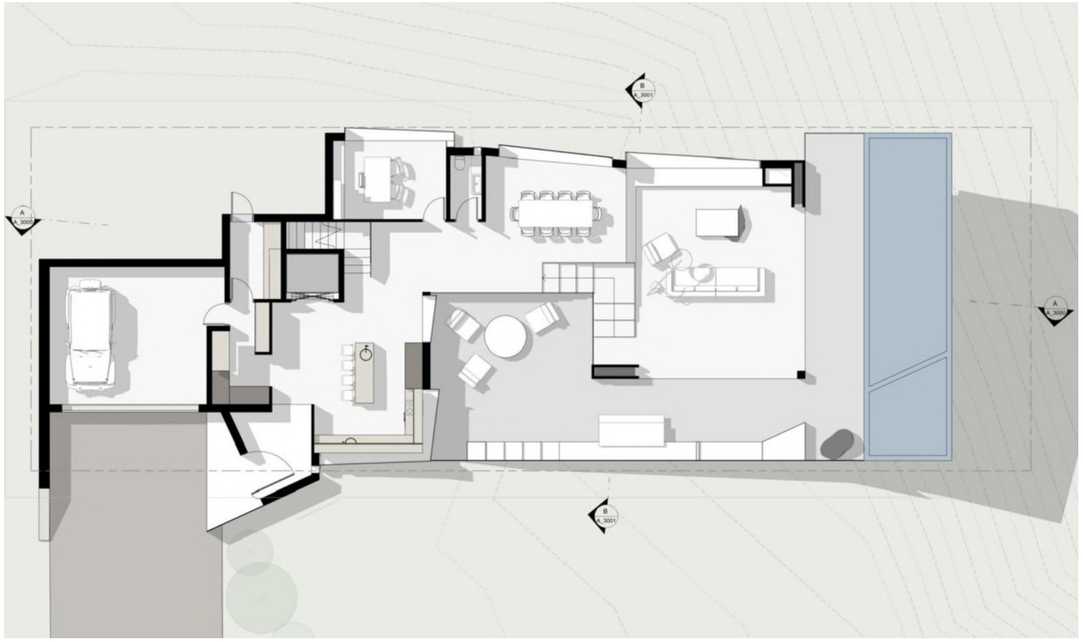

Orienting toward the Fjord

The upper floor is rotated toward the fjord, creating a more dynamic relationship with the surrounding environment.

Red Box Theatre

city as a stage

Project Type Mixed-use civic building
Theatre, Gallery and Drama School

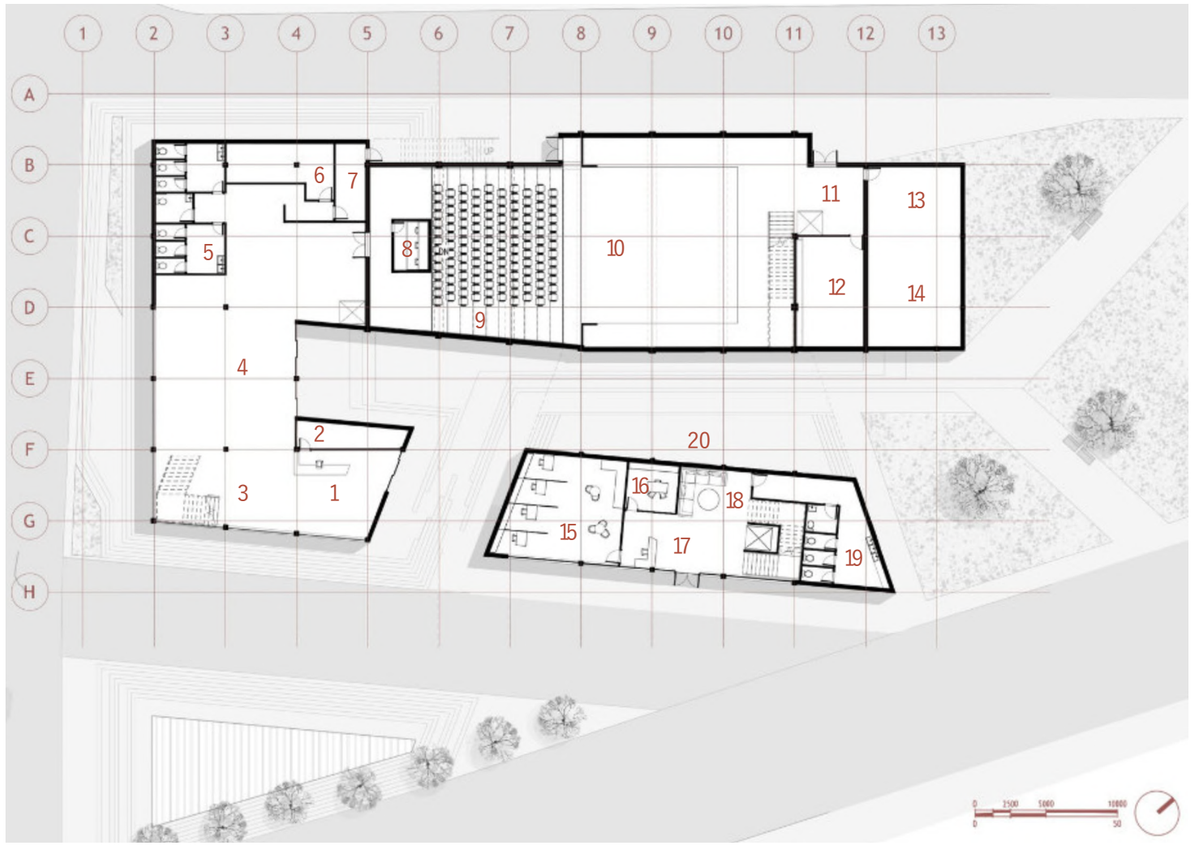

Location 10 Tuin Plein Street, Cape Town

Year 2026

Software Revit
Lumion
Procreate

About To the idea of city as a stage, where everyday life becomes the performance. My building consists of a reinforced concrete frame positioned to frame movement and views across the site. One volume engages with the public realm by exposing rehearsal spaces to the street, while the other offers a cafe oriented toward the landscape. Through the integrated ramps and inhabitable thresholds, the building dissolves the boundary between audience and performer, embedding theatre in everyday life.

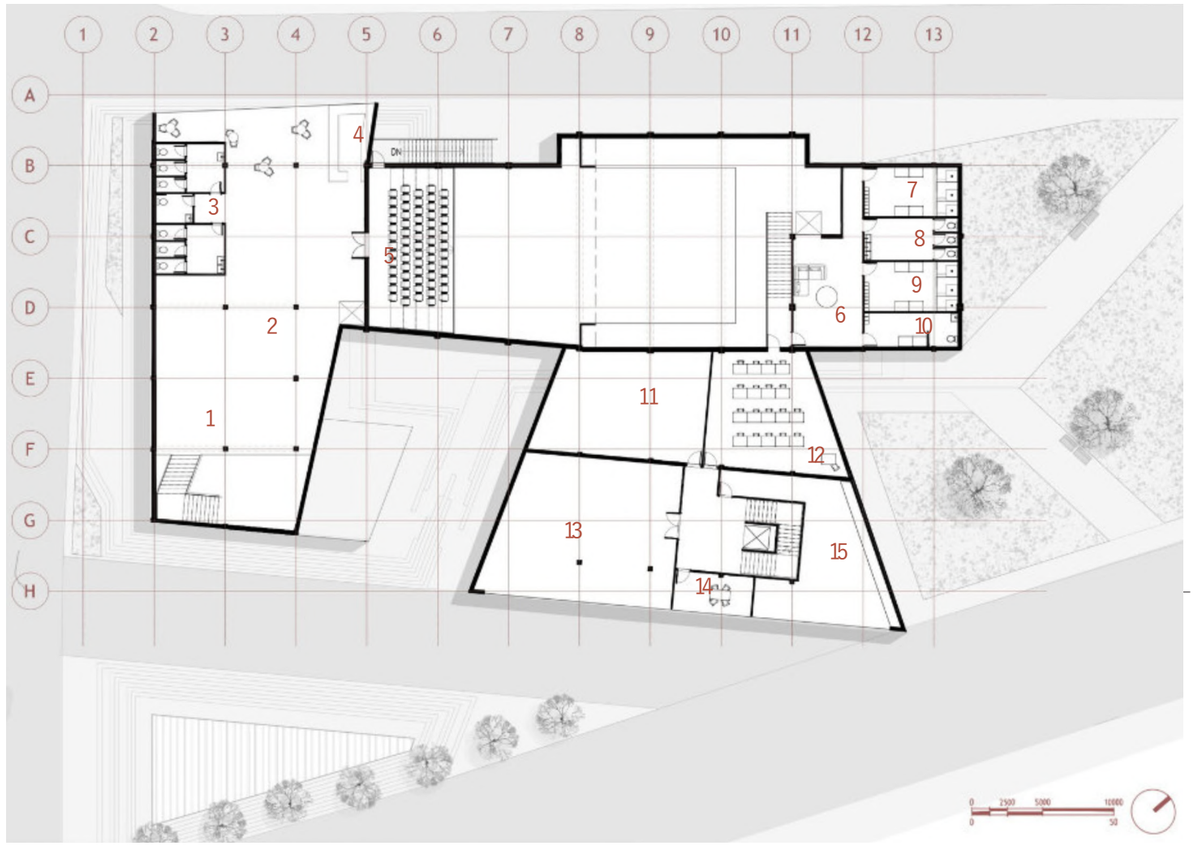

Ground Floor Plan

Stage BOH, Education Foyer + Gallery Foyer

Cafe

This space, with it's floor to ceiling, west-facing windows, frames beautiful views of lions head and the upper gardens/tamboerskloof area. This space operates as a cafe during the day and as an space where theatre visitors can have a quick drink during interval.

Theatre

Featuring 200 seats, a 120sqm stage, wheelchair accessible seating, a control booth and controlled access to the lights/gantry.

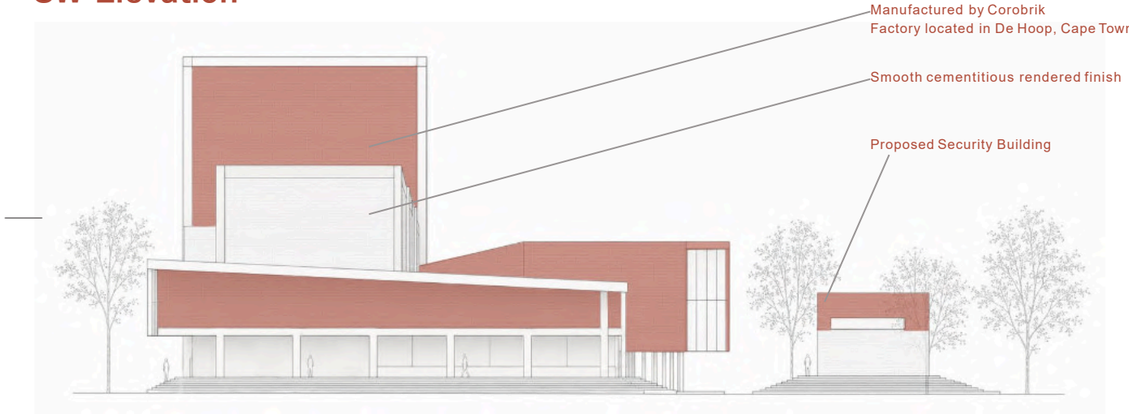

The perfect space for a range of events.

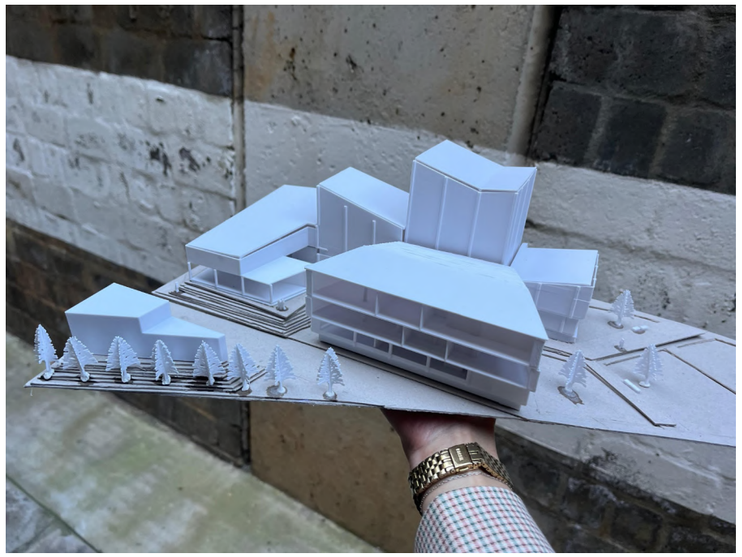

Foyer

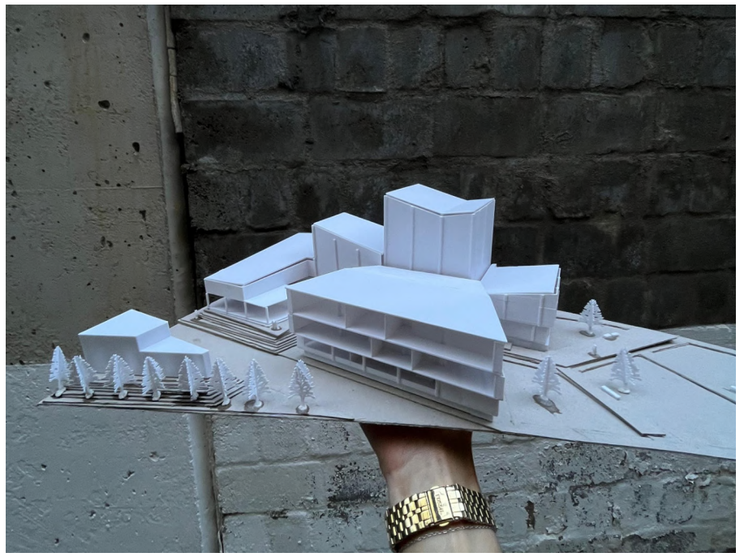

This is the main point of arrival for gallery and theatre guests. Featuring a statement staircase, and a cloakroom to the right.

SW Elevation

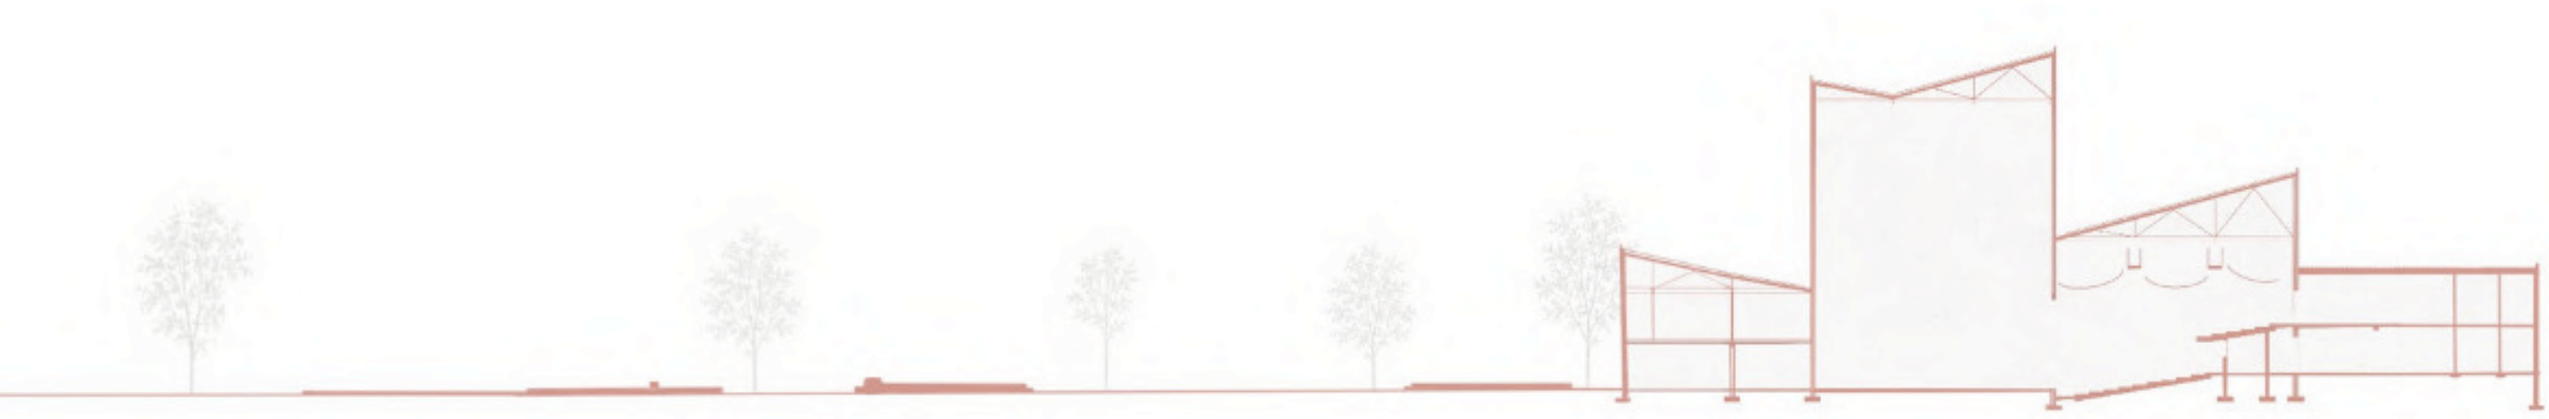

Physical Model 3D Printed, creating a minimal Revit model, exporting as an STL file and printed using the Bambu Lab A1 mini

connection, renewal, belonging

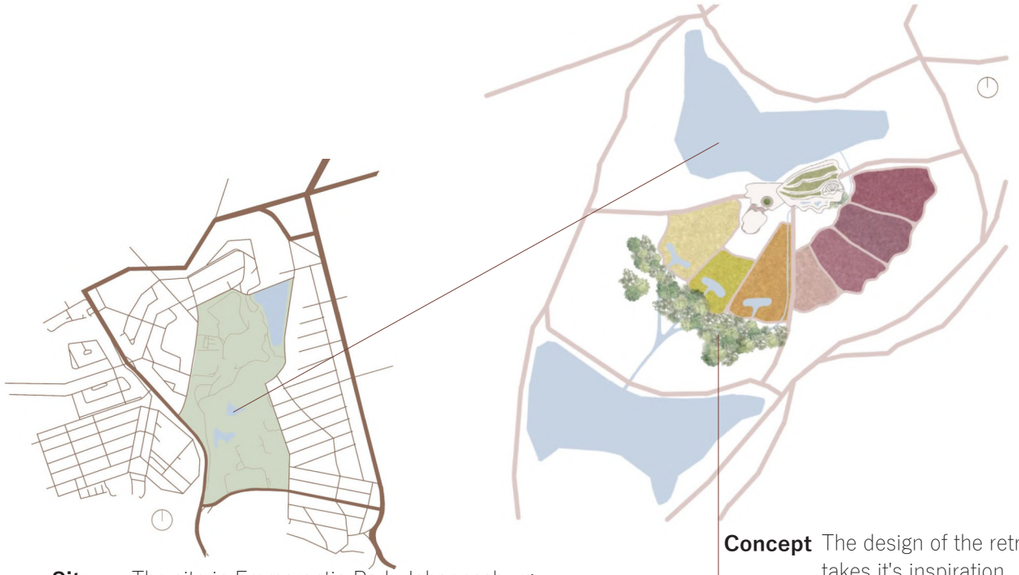

Project Type Retreat in a Public Park

Location Emmerentia Park, Johannesburg

Year 2025

Software Revit
Lumion
Procreate
Affinity

About The brief was to design a retreat centered around the four senses: sound, taste, touch and sight. Over four weeks, it developed into a multi-sensory building proposal that pushed me to work experimentally and expand my digital skills.

Site The site in Emmarentia Park, Johannesburg, between the two smaller dams, offers a rich landscape shaped by water and vegetation.

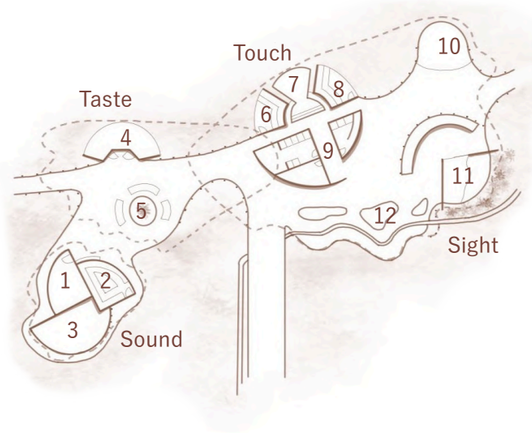

Concept The design of the retreat takes it's inspiration from the brown-veined butterfly, whose wings are reflected in the shape of the roof.

Each year this butterfly migrates from the Karoo region across southern Africa to Madagascar, often passing through the Gauteng area.

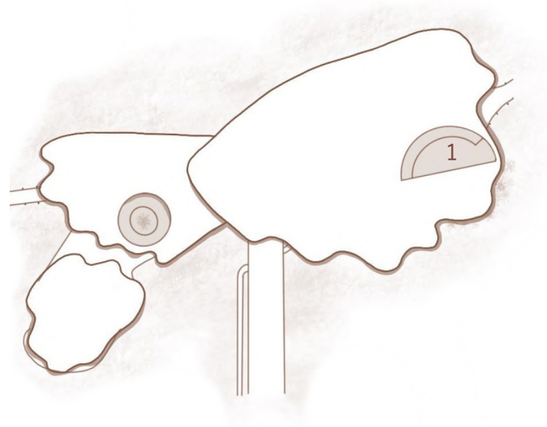

Intervention Surrounding the retreat, the Shepherd's Tree (Boscia albitrunca) will be planted. This tree is a host plant from the butterfly, providing shelter along it's journey.

By creating a landscape filled with these trees, the retreat not only attracts and supports these migrating butterflies for longer stops, but also enriches the local environment,bringing in more wildlife, strengthening biodiversity, and weaving the buildings into the ecosystem of Emmarentia Park.

Light as Design Informant

short course exploring abstract ideas as design informants

Elective How can an Abstract Architectural Value act as a Design Informant

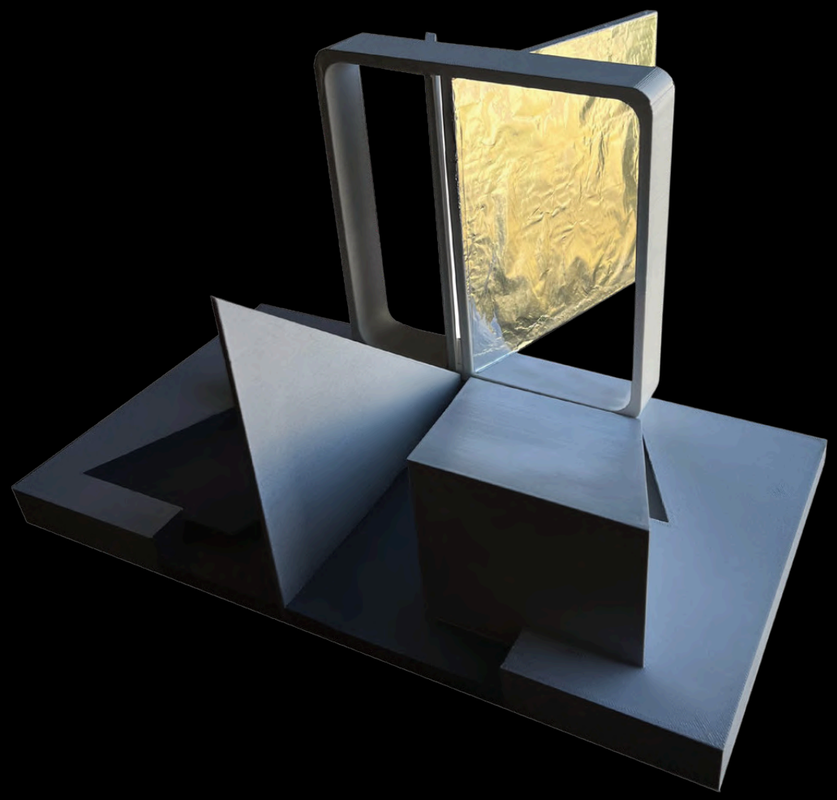

Topic I chose to research how light can act as a design informant.

Year 2026

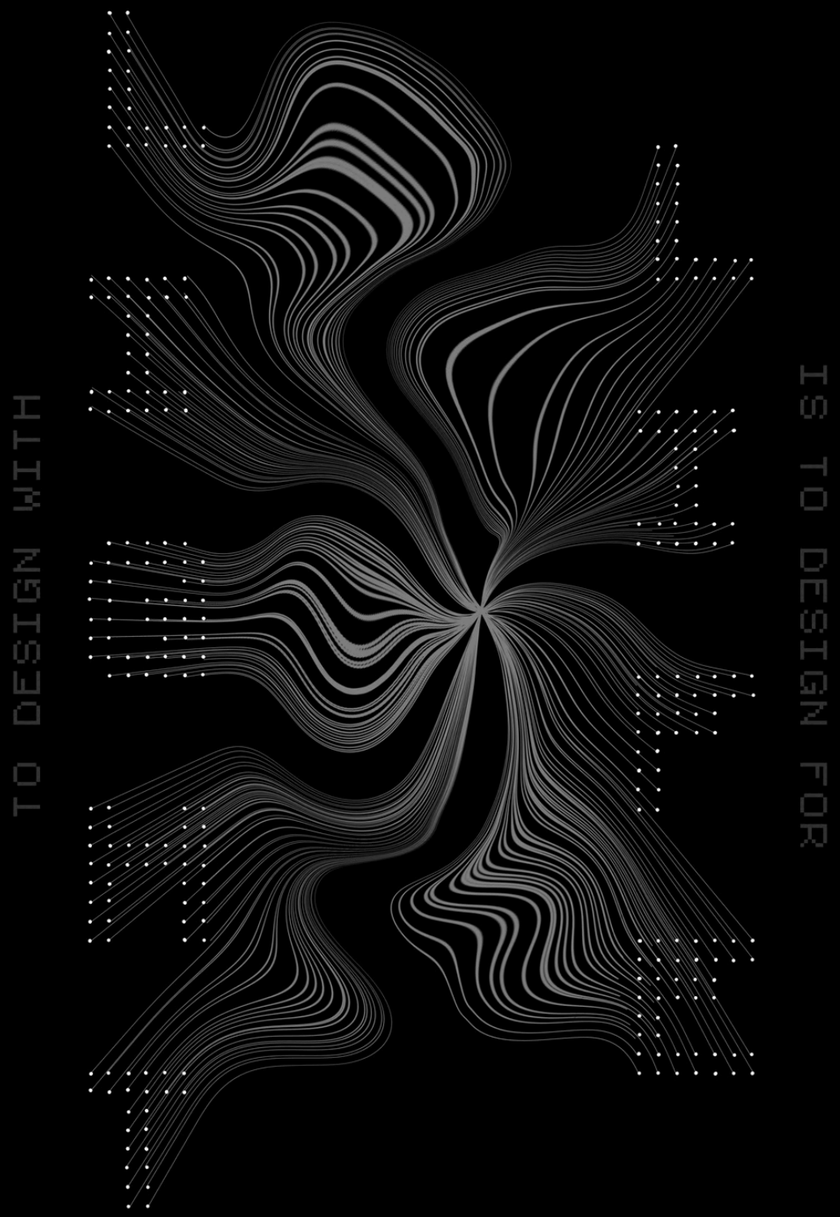

Software Procreate
Affinity

About Although this project began as a highly abstract exploration, the final hand-in required us to translate our ideas into an architectural application. In response, I developed a series of light modules designed to harvest and redirect natural light into a building at different times of the day. By controlling the amount of direct sunlight and reflected light entering a space, these modules create changing light conditions that respond to the body's natural circadian rhythm, supporting human health and well-being.

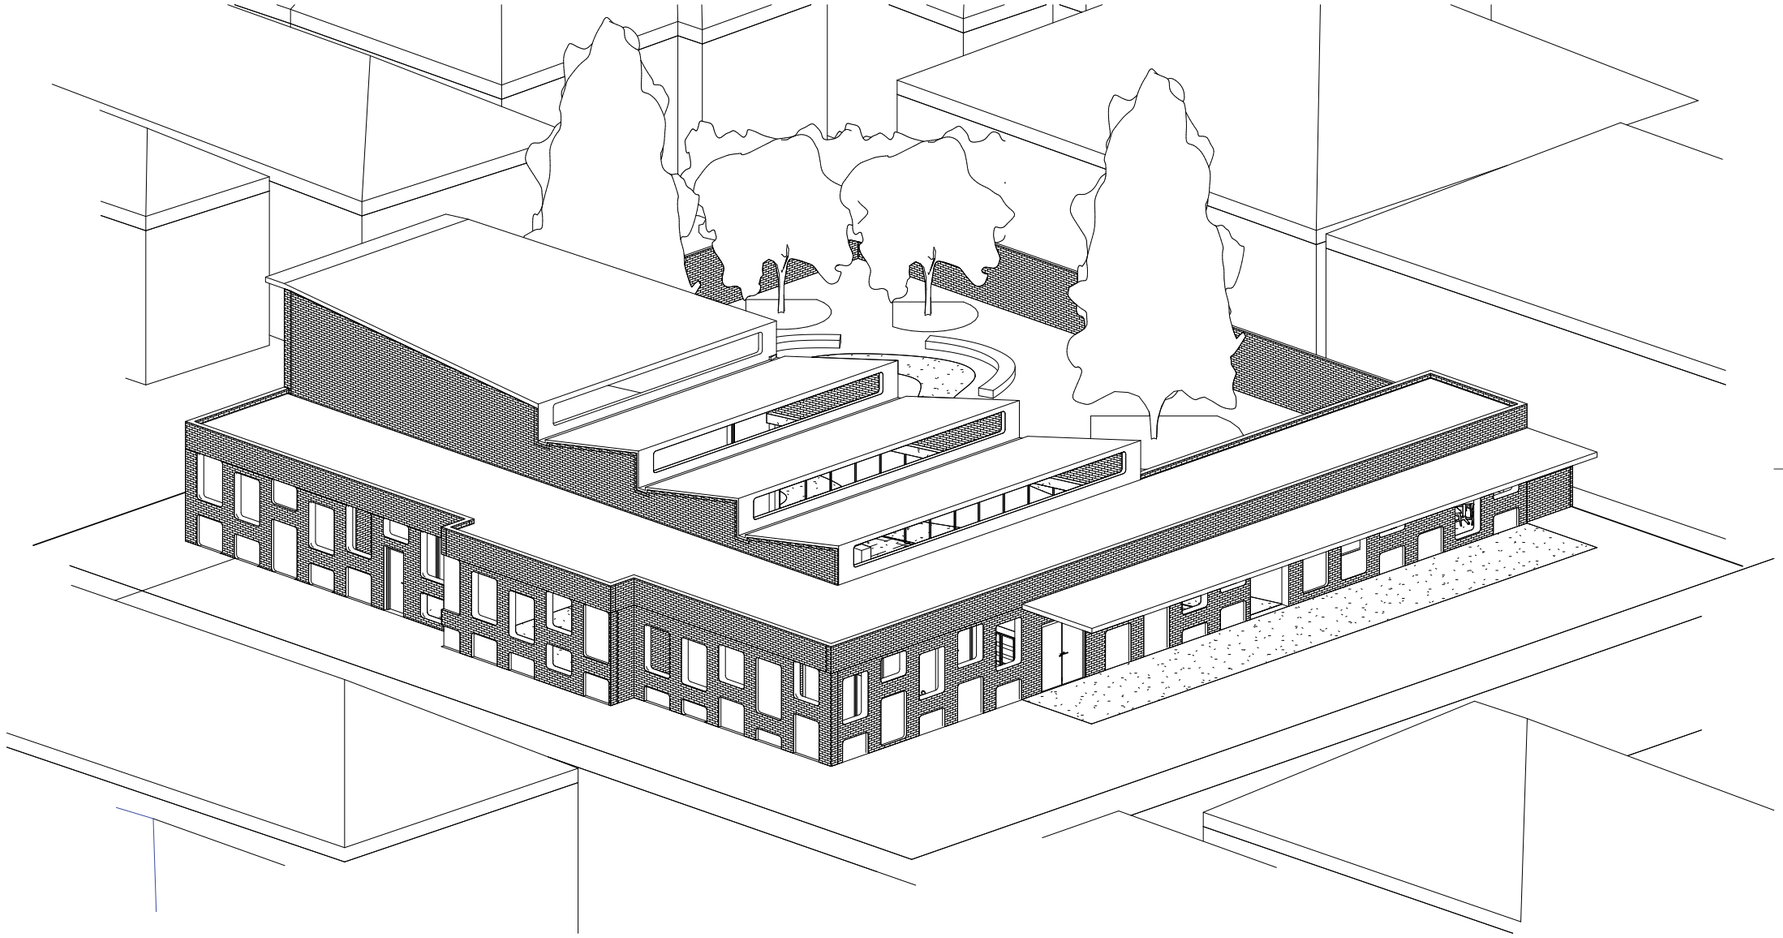

Conceptual Model Exploring the shadows and light manipulated by the reflective light module

Poster Design to design with light, is to design for life

The Woodstock Furnace

architecture to preserve history

Project Type Glass Blowing Workshop, Gallery and Coffee Shop

Location Corner of Station Rd and Arnold St, Observatory

Year 2025

Software Revit
AutoCAD
Procreate

About This project is inspired by South Africa's first glass factory, which operated in Woodstock from 1878 to 1882. Through a memorial garden, historic mosaic patterns, and a form derived from the original site footprint, the project uses architecture to preserve history.

Sun Analysis

Wind Analysis

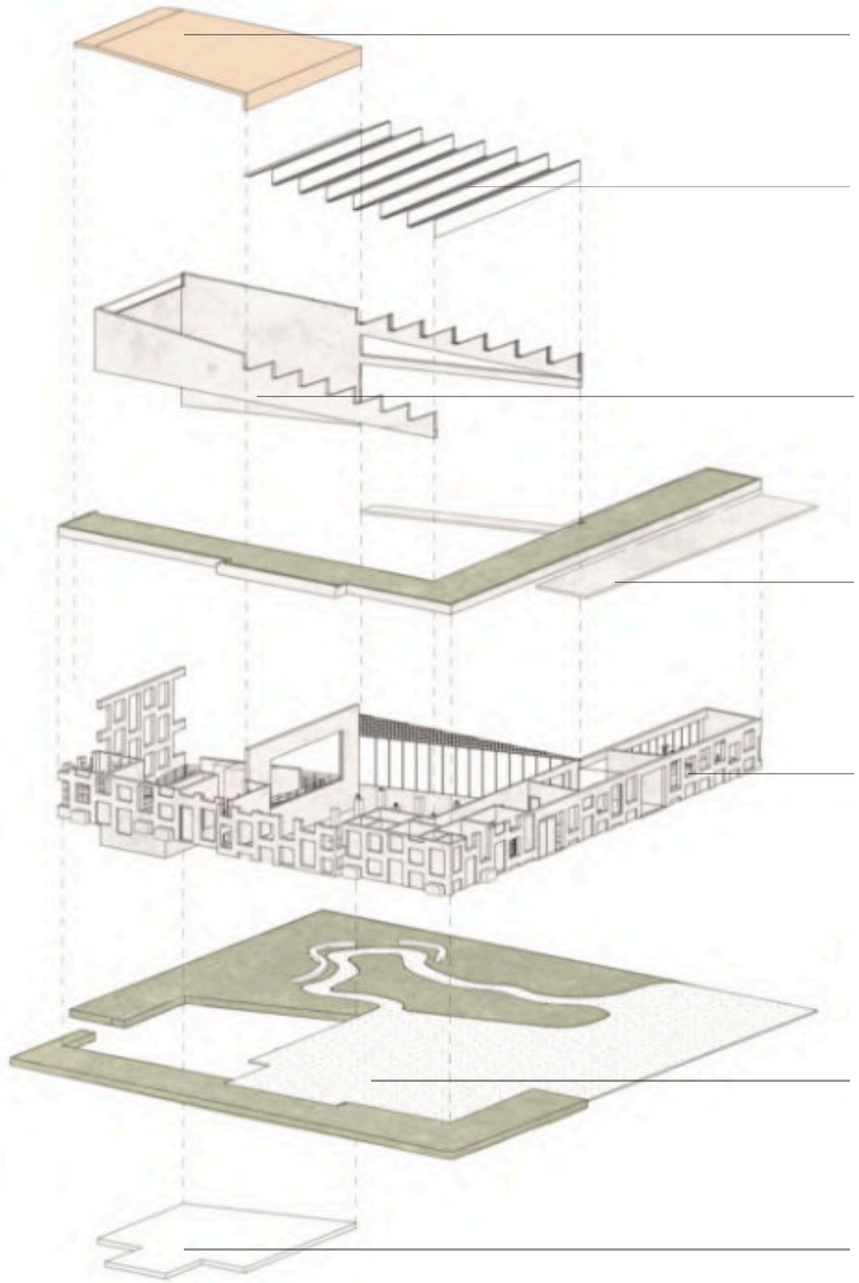

Form Development The form of the primary spaces, the gallery and the workshop, originate from the footprint of the Woodstock Glass Factory site.

Form Development The auxiliary spaces wrap around the primary volume in an L-shaped form, providing the necessary service and support areas.

Gathered Voices

a temporary pavilion for a biennale titled: platform for the unheard

Project Type Temporary Pavilion

Location Sea Point Promenade

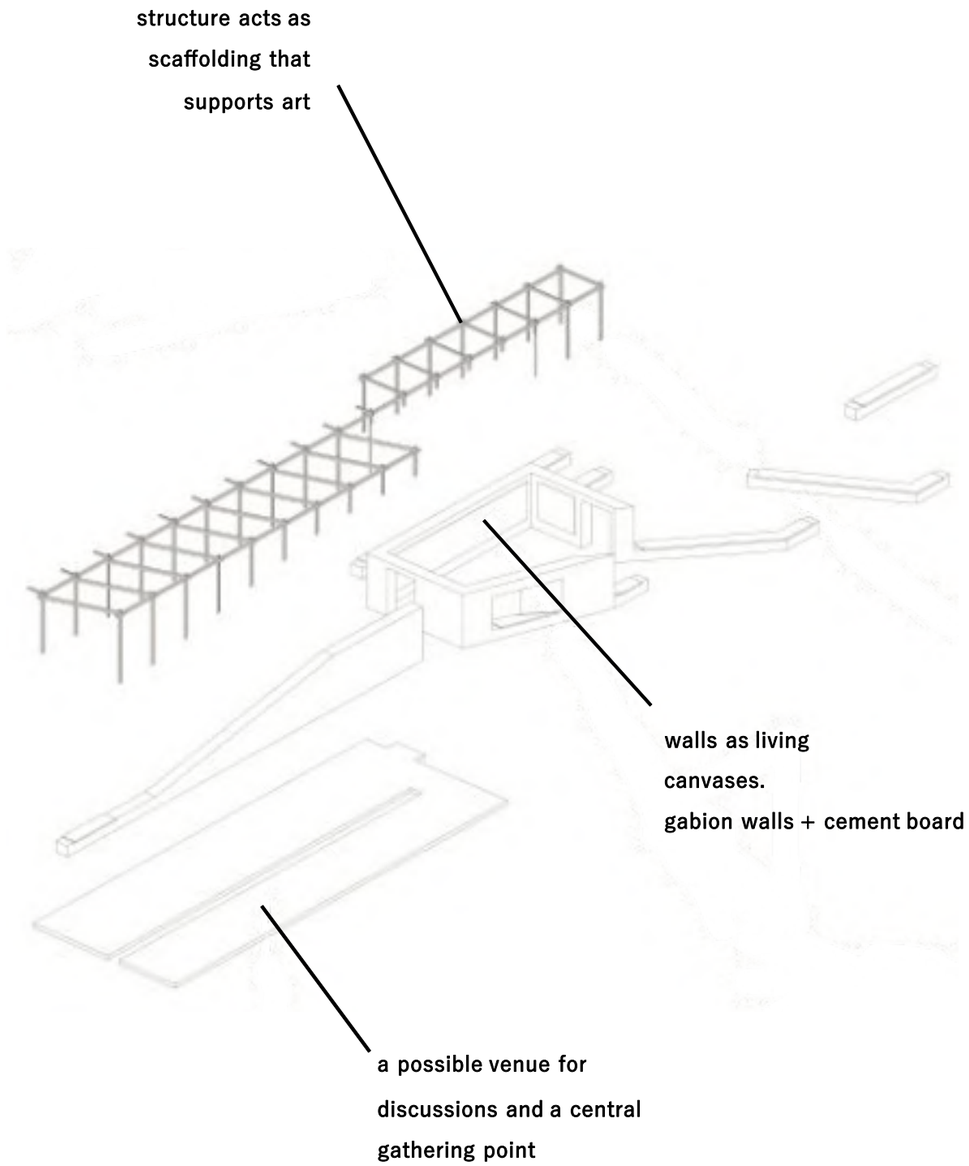

Year 2025

Software Revit
Lumion
Procreate

About Designed as a platform for unheard voices, to showcase art, hold discussions and encourage public gathering. Built from gabion walls, timber decking, and a light weight scaffold-like structure for hanging artwork - the pavilion can be assembled and removed without damaging the promenade.

structure acts as
scaffolding that
supports art
walls as living
canvases.
gabion walls + cement board
a possible venue for
discussions and a central
gathering point

Crèche

a preschool informed by Montessori and Waldorf philosophies

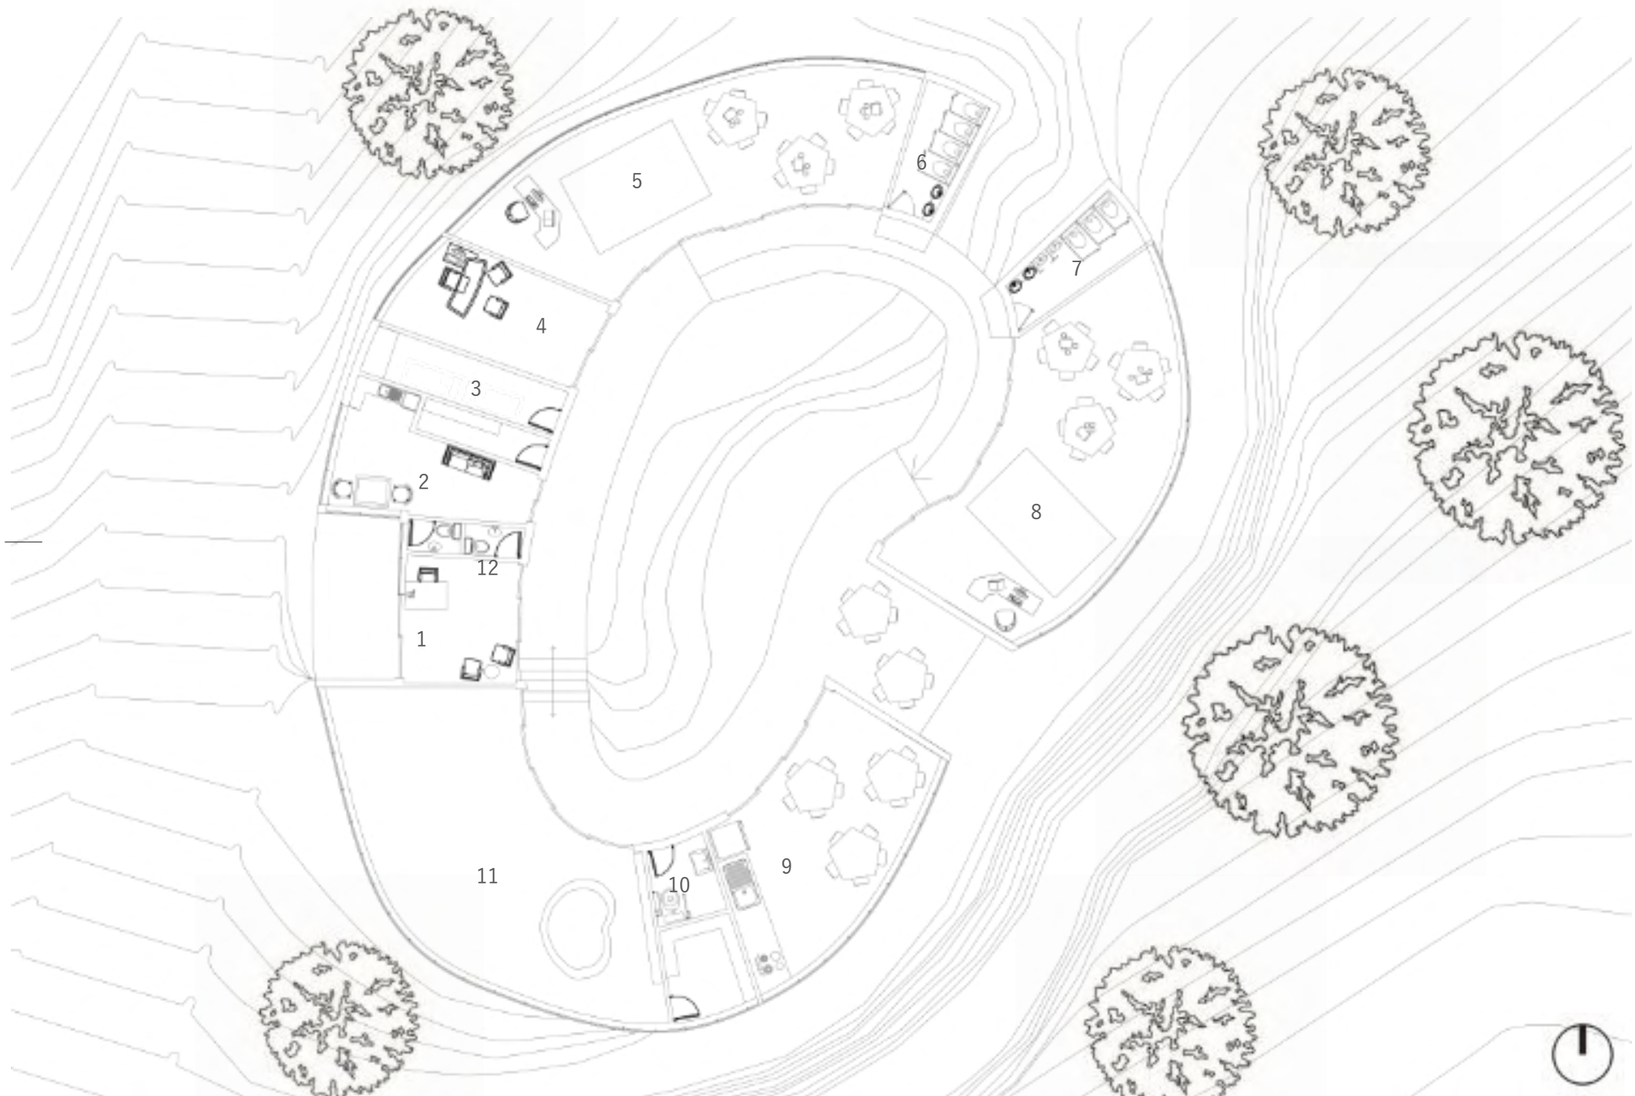

Project Type Crèche

Location Deer Park, Vredehoek

Year 2024

Software Autocad
Affinity

About This Project was a preschool informed by Montessori and Waldorf educational philosophies, exploring how architecture can support children's independence, creativity and learning. The design lead to developing a detailed topographic model made from over 40 contour layers.
